

14 ways to protect your business from a

CYBER ATTACK

Security Assessment

It's important to establish a baseline and close existing vulnerabilities.

Spam Email

Secure your email. Most attacks originate in your email.

Passwords

Apply security policies across all your network.

Security Awareness

Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

Backup

Backup local. Backup to the cloud. Have an offline backup for each month of the year. Test your backups often.

Advanced Endpoint Detection & Response

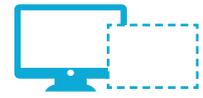

Protect your computers and data from malware, viruses, and cyber attacks with advanced end point security.

Multi-Factor Authentication

Utilise Multi-Factor Authentication whenever you can including on your network, banking websites, and social media.

\$328M Annual losses to cybercrime
148 Reports per day
\$6K Average losses per report

Dark Web Research

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach.

Computer Updates

Keep Microsoft, Adobe, and Java products updated for better security.

Web Gateway Security

Internet security is a race against time. Cloud based security detects web and email threats as they emerge on the internet, and blocks them on your network within seconds.

Mobile Device Security

Today's cyber criminals attempt to steal data or access your network by way of your employees' phones and tablets. Mobile device security closes this gap.

Firewall

Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM.

Encryption

Whenever possible, the goal is to encrypt files at rest, in motion and especially on mobile devices.

Insurance

If all else fails, protect your income and business with cyber damage and recovery insurance policies.
